

EXCHANGE MODULE (SEM)

SPAMfighter Exchange module (SEM), is the easy-to-use anti-spam/anti-virus solution for Microsoft Exchange Server 2000, 2003, and 2007. SEM now protects more than 12,000 companies worldwide.

About SPAMfighter Exchange Module:

SPAMfighter Exchange Module (SEM) is the maintenance free spam filter which integrates seamlessly with Microsoft Exchange Server.

When an email arrives, SEM sends it to the SPAMfighter Server for evaluation. If it is determined to be spam, SEM is notified and the spam mail is automatically moved to the user's spam folder.

SEM can be easily managed from a central web-based administration interface and is very simple for end users. Spam is automatically moved to a designated folder so the user never has to see it, saving employees hours of work!

- ✓ Instant protection against spam and phishing
- ✓ Safe and maintenance free
- ✓ Simple to use for end users
- ✓ Unique language filtering tool
- ✓ SPAM processing and blocking statistics
- ✓ Privacy guaranteed - your emails never leave your network
- ✓ Maintenance free - Automatic real-time updates from a community over 5 million users
- ✓ Available in multiple languages: English, German, Danish, Spanish, Greek, Dutch and French
- ✓ SPAMfighter toolbar available in Outlook web Access

**SEM is currently
protecting more
than 12,000
companies worldwide**

SEM and VIRUSfighter

One version of SEM is also available with VIRUSfighter as an add-on. This means that viruses, worms, etc., are removed before they can impact users making SEM both user-friendly and secure.
