About SPAMfighter

SPAMfighter is Europe's leading spam filter developer, providing spam protection across the globe for millions of home and business users. The SPAMfighter spam filter is unique in that it is a community based, giving e-mail users the power to fight back against spam. When an e-mail arrives it is scanned and determined to be spam or a legitimate e-mail. If it is determined to be spam, it is automatically sent to the SPAMfighter folder, and away from the user's inbox.

The idea of SPAMfighter is to get people worldwide to report the spam they get quickly and easily with a single click. When enough users have blocked a spam mail, it will be automatically filtered out for all other SPAMfighter users. Right now, millions of people all over the world are helping to make SPAMfighter almost scarily effective.

The creators of SPAMfighter also offer 2 other security products. The anti-virus program VIRUSfighter and anti-spyware program SPYWAREfighter protect computers from the latest threats.

SPAMfighter Standard VS. SPAMfighter PRO

SPAMfighter offers a free spam filter to home and private users. Both SPAMfighter PRO and SPAMfighter Standard give the same effective filtering. SPAMfighter Standard, however, is a more limited version of SPAMfighter PRO. The limitations of SPAMfighter Standard include a footer in the user's e-mail, limited blacklisting/whitelisting, and an advertisement in their Outlook or Outlook Express toolbar. All users agree to these limitations when using SPAMfighter Standard.

VIRUSfighter

VIRUSfighter protects user's machines from being destroyed by a virus. The program is easy to install, and runs discreetly in the background, watching for threats. Every time a new virus outbreak occurs, an effective antidote is quickly released and automatically installed making it so users don't have to lift a finger.

SPYWAREfighter

SPYWAREfighter uses a security technology that protects Windows users from spyware and other potentially unwanted software. Known spyware on the user's PC will be detected and removed. This reduces negative effects caused by spyware, including slow PC performance, annoying pop-ups, unwanted changes to Internet settings, and unauthorized use of private information. SPYWAREfighter gives continuous protection and improves Internet browsing safety by scanning for more than 220.000 known threats.

The SPAMfighter story

In 1995 we, Henrik Sorensen, Martin Thorborg and a couple of friends started cybernet.dk (now Jubii), one of the first Internet Providers in Denmark. One day the mail server stopped working, and it took us awhile to realize that our server was being used by spammers to distribute spam. It took us almost a week to filter the spam mails from our users normal emails, and during that week our users were unable to send or receive email.

Back then we swore that we would get revenge one day, and the subsequent years didn't make us any happier. The amount of spam grew every day, costing us money and time. So when we sold Jubii, it was very easy for us to decide what to start on next. Yes you are right - SPAMfighter!

If you want to be protected and help other people fight against spam, just download SPAMfighter, and you will be spam free within minutes.
